

ELOSTATE — Landing & Pitch Page Design Elements

A curated list of graphic and design elements that fit ELOSTATE's brand voice and would meaningfully improve the landing (/) and pitch (/pitch) pages. Brand context: dark theme, amber-yellow (#FACC15) primary, the canonical lightbulb mark, typography-first aesthetic, constitutional honesty (no fake social proof).

1 — Product visualization

Show what the thing actually is. Currently the landing claims "team problem-solving engine" but the visitor can't see it.

Element	Where	Effort	Notes
Annotated dashboard screenshot	Landing hero (below the headline)	1-2 hrs	Real screenshot of Command Center or Living Diagnosis with callouts: "the System surfaces patterns," "every event captured," "AI guidance opt-in."
C.A.R.E widget in-context shot	Landing or pitch (white-label section)	1-2 hrs	Mockup of a generic customer site with the Jeff chat widget open, mid-conversation. Sells the white-label story instantly.
Voice mode visual	Pitch (under C.A.R.E section)	2-3 hrs	The voice call surface with phases visible — listening / processing / speaking. Still or short loop.
Decision Dialogue walkthrough	Pitch (decisions section)	3-4 hrs	A 3-4 panel sequence: situation → options → reasoning → choice. Makes the methodology concrete.
Coach grading screenshot	Pitch (Coach section)	1 hr	Real screenshot of Coach grading a message with principles highlighted.

2 — Conceptual diagrams (methodology made visible)

Where the brand differentiates. Most SaaS pages can't draw their methodology; ELOSTATE can.

Element	Where	Effort	Notes
The event chain diagram	Pitch (architecture / how it works)	2-3 hrs	events → signals → problems → resolutions → (new events) rendered as a circular flow with the bulb at center. This IS your differentiator.
AMD-006 four-layer pyramid	Pitch (discipline / how we build)	2 hrs	Visual stack: structure → effectivity → composition → UI. Cite it as how the product itself is built.
60-day measurement window timeline	Pitch (proof section)	2 hrs	Horizontal timeline: Days 0-30 control (no AI), Days 31-60 intervention (AI on), Day 60 the proof.
The Understanding Gate diagram	Pitch (philosophy section)	1-2 hrs	Visual of the gate: signals accumulate to threshold before a problem surfaces. A meter with the threshold marked.

Guide-don't-overtake illustration	Pitch (Coach + Co-pilot)	2-3 hrs	Two-panel comparison: traditional AI (takes over) vs ELOSTATE (asks first, then suggests).
-----------------------------------	--------------------------	---------	--

3 — Brand pattern / texture treatments

Your brand has the bulb. Most pages use it once as the hero. There's room to extend it as a visual language.

Element	Where	Effort	Notes
Lightbulb filament pattern (background)	Section dividers, both pages	2-3 hrs	Stylized filament curves as low-opacity SVG backgrounds. Subtle, branded, doesn't fight the type.
Glow gradient transitions between sections	Both pages	1-2 hrs	Soft amber radial gradients at section boundaries. You already have <code>bulb-glow</code> ; extend the pattern.
Animated bulb intensity	Landing hero	2-3 hrs	The brand bulb subtly brightens/dims on a 4-second cycle. Hint that it's "alive."
Grid / dot pattern overlay	Pitch section backgrounds	1 hr	A faint grid of dots (1-2px, low opacity) — communicates "system, structured" without being heavy.

4 — Iconography expansion

Landing and pitch currently use few icons. Room to extend.

Element	Where	Effort	Notes
Custom icon set for the modules	Pitch (per-feature sections)	3-5 hrs	A unique mark for Decision Dialogue, Living Diagnosis, C.A.R.E — each in brand amber. Hire an illustrator OR build with SVG primitives.
Principle badges	Pitch (philosophy section)	1-2 hrs	Small icon badges for each constitutional principle ("Understanding precedes solving," "Guide don't overtake").
State icons for AI behavior	Pitch (how the AI works)	1 hr	Visual marks for "listening / thinking / asking / suggesting / handing off" — brand-coloured circles in different states.

5 — Interactive elements

The pitch is 828 lines. Interaction breaks up the read and proves the product is real.

Element	Where	Effort	Notes
Live Coach demo	Pitch (Coach section)	4-6 hrs	A textarea where visitors paste a draft message; Coach grades it live. Real, working demo using your existing

			Coach API. Massive trust signal.
Interactive decision dialogue	Pitch (decisions section)	4-6 hrs	A 3-step mini-dialogue the visitor can click through to feel the methodology.
Before/after toggle	Pitch (proof section)	1 hr	Toggle: "Month 1 (no AI)" → "Month 2 (AI on)" — switches between two stat displays. Don't fabricate numbers.
Animated scroll-driven event chain	Pitch (architecture)	3-5 hrs	As the visitor scrolls, events visually fall through the chain. Communicates data-as-asset through motion.

6 — Data visualization

For the \$4 readout / proof story.

Element	Where	Effort	Notes
Resolution durability chart	Pitch (proof section)	2-3 hrs	Simple chart of which fixes held vs reopened over time. Real or honest sample data. The anti-hype thesis lives here.
Pattern emergence visualization	Pitch (Living Diagnosis)	3-4 hrs	Scatter / graph of individual events as dots, with patterns lighting up only after enough cluster. Shows the threshold gate visually.
Communication-quality trend	Pitch (Coach proof)	2-3 hrs	Line chart: acceptance rate of suggested rewrites trending up over weeks. "Team gets better" story without a testimonial.

7 — Trust signals (without faking them)

You don't have customer logos yet (pilot-stage). Standard SaaS plays (logo walls, fake testimonials) would break your constitutional honesty. Alternatives:

Element	Where	Effort	Notes
"Constitution lives in code" callout	Landing or pitch	1 hr	Card showing a CLAUDE.md snippet with link to the public repo (if open). "Every rule we build under is in our public constitution. Audit us."
Amendment ledger preview	Pitch	2 hrs	"We've made 6 constitutional amendments since launch — each documented, ratified, append-only." Link to docs/amendments/.
AMD-006 four-layer audit trail	Pitch (how we build)	2 hrs	Show how each feature gets traced through the four layers before shipping. Unique to your build discipline.
Why no instant results	Landing (mid-page)	1 hr	A section explicitly anti-positioning against instant-results SaaS. "We refuse to claim improvement until we've measured it."

8 — Motion / micro-interactions

Subtle, brand-consistent.

Element	Where	Effort	Notes
Cursor-driven bulb glow	Landing hero	2 hrs	The bulb mark glows brighter where the cursor approaches. Tactile, on-brand.
Scroll-anchored stat reveals	Pitch	2-3 hrs	Numbers count up from 0 as the visitor scrolls past them. Standard but effective.
Section transitions	Both pages	2 hrs	Soft fade + amber accent line between major sections. Continuity.

Recommended starter pack — top 5 to ship first

If you want a focused first round, these 5 will change the landing's perceived quality the most:

1. **Annotated dashboard screenshot** — replaces "trust us, it exists" with "look at it"
2. **Event chain diagram** — your differentiator made visual
3. **60-day timeline diagram** — explains the anti-hype thesis instantly
4. **Live Coach demo** — visitor experiences the product before signing up
5. **Glow gradient transitions** — page-wide polish that costs little

Brand notes for whoever implements these:

- Primary brand color: #FACC15 (amber-yellow, derived from the lightbulb logo)
- Dark theme is the canonical look — most assets should be designed against the dark background
- Typography is Inter (300-900 weights)
- The canonical bulb mark is `LightbulbMark` in `src/components/brand/Logo.tsx`
- Existing utility classes that match the brand: `bulb-glow` , `shadow-glow` , `shadow-glow-ember` , `glass-card` , `text-brand`
- Constitutional honesty is a brand voice rule, not a tone preference — no fabricated stats, no fake testimonials, no instant-results claims
