

C.A.R.E BROWSER EXTENSION

The price, and **why it sells itself.**

A one-page justification for the sales team: what to charge, why it's right, and how to defend it against any objection. The extension puts six AI support tools on the conversation the agent is already looking at — Gmail, Slack, WhatsApp, any help desk.

\$24 / agent / month

\$19/agent billed annually

14-day free trial

Free with full C.A.R.E

Why per-seat. Cost scales with agents (each runs live AI), so does value. Per-seat keeps margin healthy and the buyer's math simple: one number, per agent, per month.

WHAT IT COSTS US

~\$5–40

per agent/mo in AI compute (the floor).
Bounded by fair-use limits.

WHAT IT SAVES THEM

~\$300+

per agent/mo in time — 20–30 min/day
saved at loaded support wages.

WHAT WE CHARGE

\$24

captures ~8% of the value created. A
clear-ROI "yes" for the buyer.

THE ONE-LINER FOR THE CALL

"Less than a coffee a day per agent for an AI coach on every conversation — it pays for itself the first time it saves an agent **twenty minutes.**"

Figures are the recommended launch pricing and market estimates for sales positioning — confirm final list price and competitor rates before contract. Time-saved is a conservative midpoint; lead with the buyer's own agent count and wage for a tailored ROI.

COMPETITIVE LANDSCAPE

Priced between generic writing tools and the incumbent-suite AI add-ons.

Where \$24 sits, and what every alternative is missing. Use this to answer "how are you different from ___?"

PRODUCT	PRICE / SEAT	WHAT IT IS	WHAT IT LACKS VS C.A.R.E
Grammarly Business	~\$15/mo	Generic writing polish across apps.	No support context, no coaching against a method, no problem diagnosis. Fixes grammar, not outcomes.
Lavender	~\$29–59/mo	AI coaching for sales emails.	Sales-only, email-only. Doesn't cover support, chat, or help-desk tickets.
Zendesk AI	~\$35–50/mo add-on	AI inside the Zendesk suite.	Locked to Zendesk. Doesn't touch Gmail, Slack, WhatsApp. No book-grounded coaching of the agent.
Intercom Fin	~\$0.99 / resolution	A bot that resolves tickets itself.	Different philosophy — replaces the agent. Cost scales with volume. Doesn't make YOUR agents better.
C.A.R.E Extension	\$24/mo	6 AI tools on ANY conversation the agent already has.	— The sweet spot: support-specialized, multi-channel, coaches the human, and priced below the suites.

THE POSITIONING IN ONE SENTENCE

"Grammarly is too generic, Zendesk's AI is locked to Zendesk, and Fin replaces your agents. We make **your** agents sharper — on every channel they already use — for less than the suite add-ons."

Two structural advantages to hammer:

- 1 It works on their existing inboxes.** No migration, no rip-and-replace. Competitors make them move; we come to where they already answer customers — so adoption is instant and the switching cost is zero.
- 2 It coaches, it doesn't replace.** Every draft names the communication move behind it (from the actual books — Never Split the Difference, Made to Stick, NVC), so agents get measurably better over time. That's a compounding asset a resolution-bot can't sell.

FEATURE VALUE & OBJECTION HANDLING

What they're paying for — and how to defend the price.

The \$24 buys six tools, on every channel:

Summarize	Catch up on a long thread in one glance — plus similar past resolutions worth reusing.
Dissect	Diagnose the real problem under the message (problem, evidence, root cause, outside view).
Ask Coach	Grade a draft against the communication books; get a revision with the named principle and why.
AI Co-Pilot	Draft the reply AND name the move it made — so the agent learns, not just copies.
Formulate	Agent types their intent in a line; it's shaped into a warm, on-brand reply. Agent stays in control.
Spawn task	Turn a conversation into a tracked C.A.R.E task without leaving the page.

Objection handling:

“\$24 a seat is a lot on top of our help desk.”

Reframe to ROI: **if it saves each agent 20 minutes a day, that's ~\$300/mo of time — you're capturing under 10% of that.** And it works across every channel your help desk doesn't cover. Start the free trial on your busiest agent and watch one week.

“We already have AI in Zendesk / Intercom.”

Those only work inside their own walls. **Your agents also live in Gmail, Slack, and WhatsApp** — this works everywhere, and it coaches the human instead of just deflecting tickets. It complements the suite; it doesn't compete with it.

“Couldn't an agent just use ChatGPT?”

ChatGPT doesn't know your product, invents details, and coaches nothing. **C.A.R.E is grounded in the customer's own product context and the communication books, and it never fabricates** — if it can't answer, it says so. That's the difference between a demo and a tool you trust in front of customers.

THE CLOSE

Lead with the **free trial**, land on their existing inboxes, and expand to full C.A.R.E. The extension is the wedge — cheap to say yes to, impossible to give back once agents rely on it.
