

WHAT'S ON YOUR SIDE

Action list

Everything I built this session is committed, pushed, and gate-verified. These are the steps only you can take — deploy, credentials, and the placeholders I can't invent. Ordered by what unblocks the most.

1 Deploy the no-migration bundle unblocks 4 features

One branch, no database step — ships C.A.R.E **Dissect**, the Sales Coach **Standard letter grade**, the `/demo/c.a.r.e` page, and the new C.A.R.E **Coach Assessment**.

branch: `integration/no-migration-2026-07-22` → [deploy on Vercel](#)

Note: auto-deploy has been off — trigger the deploy manually and confirm the Vercel Git setting.

2 Give me the Supabase Session-pooler string → I apply migration 0188

I **can** apply migrations, but this sandbox can't resolve the direct DB host. Paste the IPv4 **Session pooler** connection string (Supabase → Project → Connect) into `SUPABASE_DB_URL` and I'll run it. Or apply it yourself:

`npm run db:check` → `npm run db:apply`

3 Fill the CTA placeholders

Replace `[your booking link]` with your real booking/contact URL in three places, then it's prospect-ready:

· `BOOKING_URL` in `src/app/demo/c.a.r.e/page.tsx` · the Learning-Environment PDF · the C.A.R.E demo sheet PDF

4 After 0188 lands — deploy handover-capture

The AI→agent handover capture (name/email/concern/order) needs 0188. Once applied, deploy it.

branch: `feat/care-handover-capture`

5 Live-verify the auth-gated screens

I couldn't screenshot these (login + real data required). Eyeball them after deploy: Sales Coach **Standard letter grade**, C.A.R.E **Coach Assessment** roster, and the **Dissect** panel in the agent inbox.

Decisions

Open forks from this session. Each has my recommendation (✓ REC) — but they're yours. Tell me the letters and I'll execute.

1 · C.A.R.E Coach Assessment — how far to take it

✓ REC **A · Ship it as built, layer richer metrics later.** Letter grade + learning gaps on the data we already have — live now. Add escalation-success / service-to-sales once those signals are instrumented.

B · Go straight to the full dashboard. Escalation-success, service-to-sales conversion, trajectory — a real build (new instrumentation), not a re-scale.

C · Counts-only, drop the letter. Strictest against the no-leaderboard design; but not the "letter like Sales Coach" you asked for.

2 · Grade band thresholds (both Sales & C.A.R.E)

✓ REC **A · Keep the defaults, retune from real data.** The cutoffs are instrumentation (B = the competent standard, no F). Per our own discipline, data answers them — not a hand-set guess.

B · Tune the thresholds now. Tell me the bands and I'll set them — but we'd be encoding an assumption we could instead measure.

3 · The old whole-product tour (docs/demo.html)

✓ REC **A · Leave it.** The new /demo/c.a.r.e page is the C.A.R.E pitch; the old tour is a separate, stale artifact — no need to touch it.

B · Add a C.A.R.E module to it. If you want the whole-product tour to include C.A.R.E too.

C · Retire it. Redirect it away if it's causing confusion.

4 · Which PDF is the primary pitch

✓ REC **A · Use both, in sequence.** The **demo sheet** shows how it works; the **Learning Environment** sheet shows why it's a league of its own. Lead with the second for the "wow", close with the first.

B · One only. Tell me which; I'll fold the essentials of the other into it.

To act on any of this: reply with the action numbers you've done + the decision letters you want (e.g. "deployed 1, here's the pooler string for 2; decisions 1A 2A 3A 4A"). I'll execute immediately.
