

EloState Coaching Build Plan — Engineering Guide

2026-09-19 · @Someone

What we're building

We're turning the existing coaching app into a points-based training system. Every recorded pitch gets scored against our AT&T Fiber rubric, reps compete on pitch quality, and managers get one place to coach from: team numbers, each rep's scores and activity, their recordings, and the bad habits they keep repeating.

There are five pieces. Each builds on the one before it.

#	Project	Who sees it	What it does
1	Pitch Score engine	Backend	Scores every recorded pitch: 100 base points for running the pitch, up to +30 bonus, minus violations
2	Rep dashboard (mobile)	Reps	Progress, Breakdown, Pitch Detail and Scoring Rubric screens with a Day / Week / Month / All time toggle
3	Coach Assessment (web)	Managers	Team score and points, doors / presentations / sold, team focus, rep table and rep detail
4	Recordings tab (web)	Managers	Play any rep's recording with scored moments marked on the timeline, transcript and timestamped comments
5	Pattern Interrupt (web)	Managers and reps	Finds repeated misses across a rep's pitches, shows the clips, and tracks each pattern until it's fixed

Reference material

- Interactive mockups of every screen: [EloState Rep Pitch Dashboard canvas](#). Hit Play on any board to click through it.
- Scoring rubric: EloState AT&T Fiber Pitch Scoring Rubric (PDF)

- Scoring detail for Project 1: [Pitch Score System — Engineering Implementation Guide](#)

All numbers, names and clips in the mockups are sample data except a few transcript lines taken from real coaching notes.

Build order and data model

Build in this order. Each step unlocks the next: nothing can display until pitches are scored, and Pattern Interrupt needs timestamped scoring and the recording player.

Tables to add or extend

Table	Key fields
rubric_config	version, elements (id, section, max_points, what_counts), bonuses, violations, caps and thresholds
pitches	rep_id, recorded_at, duration, audio_url, transcript, outcome (sold / follow-up / no-sale), base, bonus, violations, total, band, qualifying, not_qualifying_reason, rubric_version
pitch_elements	pitch_id, element_id, grade (hit / partial / missed), points, timestamp_s, evidence
pitch_events	pitch_id, type (bonus / violation), id, points, timestamp_s, evidence, confidence
rep_activity	rep_id, date, doors_knocked (from rep logs)
patterns	rep_id, element_id, status, first_seen, fixed_at, cost_per_pitch, rubric_version

Table	Key fields
<code>pattern_events</code>	<code>pattern_id</code> , <code>type</code> (coached, drill_assigned, note, rep_reviewed, clip_disputed, fixed), <code>actor</code> , <code>created_at</code> , <code>body</code>
<code>recording_comments</code>	<code>pitch_id</code> , <code>author_id</code> , <code>timestamp_s</code> , <code>body</code> , <code>sent_to_rep</code>
<code>score_overrides</code>	<code>pitch_id</code> , <code>item_id</code> , <code>old_value</code> , <code>new_value</code> , <code>manager_id</code> , <code>reason</code> , <code>created_at</code>

KPI definitions

- **Doors knocked:** from rep activity logs.
- **Presentations:** recorded pitches (confirm this with John before building).
- **Sold:** pitches with outcome = sold.
- **Door → presentation %:** presentations ÷ doors.
- **Close rate:** sold ÷ presentations.

Step 1: Build the Pitch Score engine

Full detail is in the Pitch Score implementation guide. The short version:

1. Load the rubric into `rubric_config`: six sections (Introduction 12, Discovery 16, Consulting 14, Close 15, Transitions 8, Delivery 35), 13 bonuses, 5 violations.
2. Extend the AI scoring step to return a grade, points, timestamp and evidence for every element, bonus and violation. Grade intent, not exact wording. Never grade customer numbers, promo prices or timelines for accuracy.
3. Calculate: `total = max(0, base + min(bonus, 30) - violations)`. If no objection happened, scale the other Delivery skills from 27 up to 35.
4. Mark qualifying pitches (reached Discovery and $\text{base} \geq 40$) and store the reason when one doesn't qualify.
5. Build one aggregate query per rep and per team for `day`, `week`, `month`, `all`: averages, totals, section and element averages, bonus and violation stats, and the KPIs above. Section averages must add up to the base average.

Step 2: Build the rep dashboard (mobile)

Match the mockup boards Progress, Breakdown, Pitch detail and Scoring rubric.

1. **Progress:** period toggle, rank, competition card, average Pitch Score gauge (0 to 130), base / bonus / violation chips, "View scoring rubric" button, total points, pitches counted, best 3 pitches, input-based milestones. Remove Strong calls, Deals closed and the last 6 calls chart.
2. **Breakdown:** same toggle, biggest-opportunity callout, six expandable sections with Hit / Partial / Missed rates per element, bonus table, violation table, and the reconciling footer equation.
3. **Pitch detail:** score card, points by section, element rows with grade, evidence, a play button that jumps to the timestamp, bonuses earned and missed, violations, and a Dispute button.
4. **Scoring rubric:** read-only, rendered from `rubric_config` so it never goes stale.

The period selection carries across Progress and Breakdown.

Step 3: Rebuild the Coach Assessment page (web)

This replaces the current Coach Assessment layout under Manager Dashboard. Match the board "Coach Assessment — manager dashboard (web)". Everything on the page follows one Day / Week / Month / All time toggle in the header.

1. **Team score cards:** team average Pitch Score with base / bonus / violations, team total points with today's gain, pitches counted, and prize-eligible reps (5+ counted pitches).
2. **Team activity:** doors knocked, presentations, sold, door → presentation %, close rate, each with today's count.
3. **Team rubric averages:** six section bars, lowest section flagged.
4. **Needs your attention:** rude/dismissive flags to confirm, open score disputes, reps not yet prize eligible, dissects that didn't auto-generate (keep the existing Generate missing action).
5. **What the team needs to work on:** the existing training brief, reshaped into three priority cards. Map each priority to a rubric section and show the team average and points per pitch left on the table. The drill collapses to one line. Keep Rebuild.
6. **Reps table:** rank by total points, avg Pitch Score and band, trend, total points, doors, presentations, sold, close %, lowest section, coaching grade, and the rep's one focus from the brief. No Counted column. Clicking a row opens rep detail.

7. **Rep detail, Overview tab:** the rep's five activity KPIs vs. team average, score cards, six sections vs. a team-average marker, one focus, doing well, coaching focus, skill scores.

The existing coaching grade and notes stay unranked; only the Pitch Score and KPIs are compared across reps.

Step 4: Add the Recordings tab to rep detail

Match the board "Coach Assessment — Recordings tab open (web)".

1. **Recording list:** newest first, with date, time, length, outcome badge, Pitch Score, and number of pattern moments. Label non-qualifying pitches "Not counted."
2. **Player:** audio with a waveform, play/pause, -10s / +10s, and speed (1x, 1.25x, 1.5x, 2x).
3. **Timeline markers** above the waveform from `pitch_elements` and `pitch_events`: missed elements and violations (red), Pattern Interrupt moments (brown), bonuses (green), manager comments (blue). Clicking a marker seeks to it.
4. **Key moments list:** the same markers with timestamp and points; click to seek.
5. **Transcript at the playhead:** show the lines around the current time and highlight the flagged line.
6. **Comment at timestamp:** save to `recording_comments`; "Save and send to rep" notifies the rep and shows the comment in their Pitch detail.
7. **Adjust score** writes to `score_overrides` and recalculates the pitch. **Save as team example** needs the rep's permission before other reps can hear it.

Step 5: Build Pattern Interrupt detection

Pattern Interrupt finds habits, not one-off mistakes. Run detection every time a pitch is scored.

1. **Detect:** for each rep and each rubric element, bonus or violation, look at the last 10 pitches where it applied. If it was missed in 3 or more, open a pattern (status **New**). Ignore pitches where it didn't apply, such as the non-decision-maker save when the decision maker answered.
2. **Cost:** average points lost per applicable pitch on that item. Store it at detection; it becomes "points recovered" when fixed.
3. **Clips:** attach up to 3 of the most recent missed moments (from `pitch_elements` / `pitch_events` timestamps), plus the rep's own best "done right" moment as a model clip if one exists.

4. **Statuses** (drive them from data and `pattern_events`):

Status	Rule
New	Detected, no coaching yet
Coaching	Manager marked coached, assigned a drill, or added a note
Improving	Miss rate in the last 5 applicable pitches is lower than the first 5, and at least one clean pitch
Stalled	Coached 7+ days ago, no clean streak, miss rate not improved
Fixed	Done right in 5 applicable pitches in a row; clears automatically

5. **Team-wide patterns:** when 3+ reps have an open pattern on the same item, show it at the top of the Patterns tab with "Add to team brief."

Step 6: Build the Pattern Interrupt screens (web)

Add **Pattern Interrupt** to the side menu under Manager Dashboard, after Score Calibration. It has two tabs.

Patterns tab (manager), board "Pattern Interrupt — manager: Patterns (web)":

1. Explainer strip and four counts: active, new this week, improving, fixed this month.
2. Team-wide pattern banner.
3. Rep chips with open-pattern counts.
4. Pattern list: section and element, status, a dot strip of the last 10 applicable pitches (missed / done right / not applicable), "X of Y" and cost per pitch.
5. Pattern detail: why it matters, what the pitch calls for (from the rubric config), clips with play buttons, path to fixed (0 to 5 streak), coaching notes, and actions: Assign Role Play drill, Add note, Mark as coached, Schedule check-in. Each action writes a `pattern_event`.

Rep progress tab (manager), board "Pattern Interrupt — manager: Rep progress (web)":

1. Team strip: open, fixed this month with average days to fix, stalled, awaiting rep review, points recovered.

2. Rep list sorted by who needs attention first, with a status: **Needs 1:1** (any stalled pattern), **Follow up** (coached but not reviewed, or open 5+ days without coaching), **New rep**, or **On track**.
3. Previous / next arrows to walk through every rep.
4. Rep detail: stats, plain-language alerts, a month timeline with each pattern's bar and markers for coached, drill assigned and rep reviewed, a table of where each pattern stands (status, days open, misses first 5 vs. last 5, clean streak, reviewed, last coaching), an auto-built check-in agenda, and fixed patterns with days to fix and points recovered.

Rep web view, board "Pattern Interrupt — rep (web)": the same Patterns screen limited to the rep's own patterns, in a My Coaching menu group. No team data or rep chips. Rep actions: Practice in Role Play, I've reviewed this (writes `rep_reviewed`), and This clip looks wrong (writes `clip_disputed` and alerts the manager).

Launch checklist

Before launch, run 10 to 20 real recordings through the scorer and have a manager grade the same pitches by hand. Ship when they agree on most elements.

- ☐ Section maxes add to 100; bonus capped at 30; total never below 0
- ☐ No-objection pitches get Delivery scaled to 35
- ☐ Different bills, speeds and promos than the script don't cost points
- ☐ Non-qualifying pitches are excluded everywhere and show their reason
- ☐ Every period reconciles: sections sum to base; base + bonus – violations = avg score; rep totals sum to team totals for points, doors, presentations and sold
- ☐ Period toggle carries across screens
- ☐ Every marker and clip plays the right moment in the recording
- ☐ Comments sent to a rep appear in their Pitch detail
- ☐ Score overrides, disputes and pattern actions are logged with who and when
- ☐ A pattern opens at 3 of 10, clears after 5 clean in a row, and turns Stalled after 7 days coached with no change
- ☐ Reps only ever see their own patterns and recordings
- ☐ Scoring rubric screens match the live config
- ☐ Existing coaching grade and notes are unchanged

Open decisions

- **Presentations source:** recorded pitches, or a separate rep log? The mockups assume recorded pitches.
- **Pitches counted card:** keep it in the team summary or remove it along with the table column?
- **Partial grades in pattern detection:** count a Partial as a miss, or only Missed? The mockups count Missed.
- **Audio-inferred bonus threshold:** start at 80% confidence for the inside house / backyard bonus and adjust after testing.
- **Team examples:** confirm the rep-permission flow before any clip is shared with other reps.
