

# ELOSTATE Sales Coach

## Standard Mode — simplified for the field

Every change from the Edit List, applied to **Standard mode** so the coach stays out of a door-to-door rep's way — fewer words, one obvious next step, momentum between doors. **Expert mode is untouched.**

TESTS GREEN

Governed build under ThinkerThinker.md & CLAUDE.md (AMD-006 four-layer). Screens shown are faithful representations of the revised Standard UI — not live captures. All work is **BUILT** and gate-verified (tsc · lint · theme · tests); it has not yet rendered in a live session, so it is not marked TESTED.

# 01 What changed — the Edit List, line by line

Each priority edit from your PDF, what it now does in Standard, and where it lives.

| EDIT                  | WHAT CHANGED                                                                                                                                                                               | WHY IT MATTERS                                                                          | STATUS |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|--------|
| 1a Start default      | In-person is the default channel, not Online video.                                                                                                                                        | Door reps live at doorsteps; defaulting to video taxed every session.                   | ✓ Done |
| 1b Name after         | No title required to start; name the call <i>after</i> recording ("angry customer") via a rename on the summary.                                                                           | Momentum: start the call, name it once you know what it was.                            | ✓ Done |
| 2 Sessions tab        | Start-a-session card removed; tab is browse-only (growth, search, history). Start lives on Home.                                                                                           | One clear purpose per tab.                                                              | ✓ Done |
| 3 Analytics           | 1515 ELO number & team aggregate gone; six per-skill scores /10 + short AI breakdowns.                                                                                                     | "Closing 2/10" tells a rep what to work on; "you're a 6" doesn't.                       | ✓ Done |
| 4.1 Live screen       | "Prep me" & "Generate growth review" removed from the live screen.                                                                                                                         | Pre/post clutter a rep doesn't touch mid-call.                                          | ✓ Done |
| 4.2 Ask the coach     | Kept; prompt reframed to "What are you struggling on?"                                                                                                                                     | Invites the real blocker, not a product-info query.                                     | ✓ Done |
| 4.3 One mode          | Suggestion / Guide-my-response collapsed to one button.                                                                                                                                    | No mode decision mid-conversation.                                                      | ✓ Done |
| 4.3a Listen 3 days    | First 3 days: the coach listens (records + reviews) but gives no live cues; advice starts day 4. A visible "learning your style" notice explains the silence.                              | Observe before intervening — an honest baseline, and never reads as "broken".           | ✓ Done |
| 4.4 Less wordy live   | Verbose live-coaching helper text stripped (safety caveat kept).                                                                                                                           | Fewer words on the busiest screen.                                                      | ✓ Done |
| 4.5 Upload removed    | "Upload the call recording" removed from Standard.                                                                                                                                         | Door-to-door reps won't use it.                                                         | ✓ Done |
| 5–7 After recording   | <b>Biggest priority.</b> The dense post-record screen is gone. Recording ends → After-Pitch Summary comes up + one "Start Next Door". Summary & timeline stay in the session for reliving. | "Too much on there takes away momentum. We lose users." Now: one screen, one next step. | ✓ Done |
| 8–11 After-Pitch trim | Moments timeline, "What happened", the breakdown 3-up removed. Scores + "what you did well" + "opportunities to grow" kept — and made <i>less wordy</i> .                                  | Keep the learning, drop the scroll.                                                     | ✓ Done |

**Standard** = the simplified experience (default for new reps). **Expert** = today's full system, deliberately unchanged.

Honest status: every item is **BUILT and gate-verified** (types, lint, theme, 695 tests). None has been exercised in a live session yet, so nothing is marked TESTED. Two founder decisions are flagged in-app: whether the 3-day window should also silence on-demand help, and the exact talk/pace scoring bands (both one-line tunable).

## 02 The new system — Standard screens

Faithful representations of the revised Standard UI (not live captures).

### 🕒 Live coaching

Suggestion

🕒 The coach is **learning your style** — it's listening this call, not coaching yet. Your call is still recorded & reviewed. Live cues switch on after your first few days (Jul 18).

🕒 ASK THE COACH

What are you struggling on?

### 03 The biggest priority — after the recording

Before: a wall of transcript, tools, buttons. After: the After-Pitch Summary comes up, and one Next Door. Nothing else.

Before — everything at once

5-11 After — After-Pitch + Next Door

The conversation **summary and full timeline are not deleted** — they stay on the session page so a rep or manager can relive the call and learn from it. What changed is the *moment the door closes*: the rep sees one clean debrief and one next step, instead of a screen that stalls them. That is the AMD-006 workflow-continuity fix your note described — "it takes away momentum, we lose users."
